UNECE Regulation No.:

As last amended by:

for:	a system	a separate technical unit
	a component, vehicle part	a vehicle
	an item of equipment, a part	(other, please specify)

Application for testing/inspection activities and/or the granting/extension/revision of a type-approval at NSAI (e24/E24)

Type (manufacturer's name for the identification of the approval object):

Variant(s) (these can also be given as a list to be enclosed):

Trade make(s):

Short description of the approval object:

Name(s) and address(es) of production/assembly plant(s):

We hereby accept the costs of any testing/inspection activities, approval fees and NSAI handling. This includes also, where required, the costs of initial assessment's activities. Furthermore, we make a commitment to pay for these activities in accordance with the General trading Terms and Conditions of FAKT*,**.

With regard to the approval object, we hereby certify that:

- no application for a type-approval concerning the same type has been filed to any other approval authority, and no other approval authority has granted such an approval to the approval holder;
- no approval authority has refused to grant a type-approval for that type;
- no approval authority has withdrawn a type-approval for that type;
- the approval holder has not revoked an application for a type-approval concerning that type.

Where an approval holder is applying to NSAI for a whole vehicle type-approval (WVTA) using the step-by-step, mixed or multi-stage type-approval procedure, the approval holder shall:

- provide NSAI with information relating to any unsatisfactory control of conformity of production for any relevant system, component or separate technical unit used as part of the WVTA application;
- undertake, following the granting of a EUWVTA, to provide NSAI with a statistically relevant number of sample vehicles and their certificates of conformity to verify their compliance at a time to be decided.

Furthermore, we accept that for the purpose of continuous verification:

- NSAI may at any stage verify the conformity control methods applied in each production facility. NSAI will carry out or arrange to be carried out on its behalf, such verifications at least once every three years. NSAI will give notice of its intention to carry out verifications to approval holders prior to the verification exercise. The approval holder shall grant NSAI access to the manufacturing, inspection, testing, storage and distribution sites and shall provide all necessary information with regard to the quality management system documentation and records. NSAI may request a technical service to carry out the surveillance activities on its behalf;
- the frequency of these inspection events will be based on a risk assessment carried out by NSAI and/or the minimum time intervals specified by each (EC/EU Directive/Regulation or UNECE Regulation);
- the fees associated with a Continued Verification are levied on the approval holder, who makes a commitment to pay for these in accordance with the customary payment terms and conditions set. Failure to do so will result in the suspension of type-approval and may lead to a withdrawal of the type-approval;
- At the time of the surveillance audit, records of tests or checks and records of production shall be made available to the inspector.
- when the surveillance audit takes place, records of tests or checks and records of production, in particular records of documented tests or checks, shall be made available to the inspector;
- the minimum number of samples taken for the purpose of physical testing is agreed between NSAI and the technical service before the surveillance audit takes place;
- the inspector shall verify that the product conformity arrangements implemented by the approval holder are those which were submitted to NSAI at the time of initial assessment;
- where the inspector – or whoever deems it necessary to verify the validity of the tests that were carried out – is of the opinion that the level of control is unsatisfactory, samples shall be sent to the technical service to perform physical tests in accordance with the requirements on conformity of production, set out in the regulatory acts;
- where unsatisfactory results are found during an inspection or a monitoring review, NSAI will take all necessary measures to ensure that the approval holder restores the conformity of production as rapidly as possible. Failure to do so will result in a withdrawal of the type-approval.

Information regarding type-approvals withdrawn by other type-approval authorities on the basis of unsatisfactory control of conformity:

Not applicable, as no type-approval has been withdrawn
